

HaloFormCraft — API Endpoints Spec

This document details all available API endpoints across the HaloFormCraft project-centric multi-tenant architecture.

1. Project Management Endpoints (Admin)

These endpoints manage the project container hierarchy.

Method	Route	Purpose
POST	/api/admin/projects	Creates a new project container (e.g., Clinical Trials, Longevity Research).
GET	/api/admin/projects	Lists all active multi-tenant projects.
GET	/api/admin/projects/{project_id}	Retrieves detail of a specific project.
PUT	/api/admin/projects/{project_id}	Updates metadata (name, description, slug) of a project.
DELETE	/api/admin/projects/{project_id}	Soft-deletes a project container.
GET	/api/admin/projects/{project_id}/stats	Compiles project-level dashboard reporting stats (e.g., active hospital list, form count, total submission counters).

2. Hospital / Site Infrastructure Endpoints (Admin)

These endpoints map active clinical clinics, hospitals, or centers to specific project workspaces.

Method	Route	Purpose
POST	/api/admin/projects/{project_id}/hospitals	Creates and registers a new hospital site/center inside a

Method	Route	Purpose
		specific project container.
GET	/api/admin/projects/{project_id}/hospitals	Lists all registered hospitals/clinics inside a specific project.
GET	/api/admin/hospitals/{hospital_id}	Retrieves detail of a single hospital record.
PUT	/api/admin/hospitals/{hospital_id}	Updates hospital attributes (name, site_code, active camps).
DELETE	/api/admin/projects/{project_id}/hospitals/{hospital_id}	Soft-deletes/unregisters a hospital site from a project environment.

3. Form Definition Lifecycle Endpoints (Admin)

Endpoints handling form creation, logic editing, and version publishing.

Method	Route	Purpose
POST	/api/admin/projects/{project_id}/forms	Creates a new form definition scoped to a project container.
GET	/api/admin/projects/{project_id}/forms	Lists all forms registered under a specific project context.
POST	/api/admin/forms	Standard legacy fallback route to create a global form.
GET	/api/admin/forms	Lists all active forms globally.
GET	/api/admin/forms/{form_id}	Retrieves a single form config along with its structural

Method	Route	Purpose
		hierarchy.
PUT	/api/admin/forms/{form_id}/versions/{version_id}	Updates schema, logic, and UI elements of a specific Form draft version.
POST	/api/admin/forms/{form_id}/publish	Transition a form draft version from DRAFT to PUBLISHED (closes former version).
GET	/api/admin/forms/{form_id}/submissions	Lists all clinical submissions collected specifically for a form.
GET	/api/admin/forms/{form_id}/export	Extracts compiled CSV/JSON records of form submissions.

4. Patient Facing Portal Endpoints (Client UI)

Context-aware, safe patient/collector endpoints.

Method	Route	Purpose
GET	/api/patient/forms	Queries published forms. Automatically accepts ?project=SLUG and ?site=CODE search filters to deliver project-isolated forms.
GET	/api/patient/forms/{form_id}	Fetches active schema, conditional layout, and validation rules of a form.
POST	/api/patient/forms/{form_id}/submissions	Persists a patient record. Injects ?project=SLUG&site=CODE¢er=CAMP parameters to auto-tag submission metadata.
GET	/api/patient/submissions	Fetches submission history list completed from the user session.
